

# CONSCIOUSNESS AND QUANTUM COMPUTERS

The human brain functions according to quantum mechanical principles.

Well, it is the material basis which decides if a quantum computer can be the carrier for a continuum of consciousness.

It has always been my claim that quantum computers represent some sort of consciousness technology!

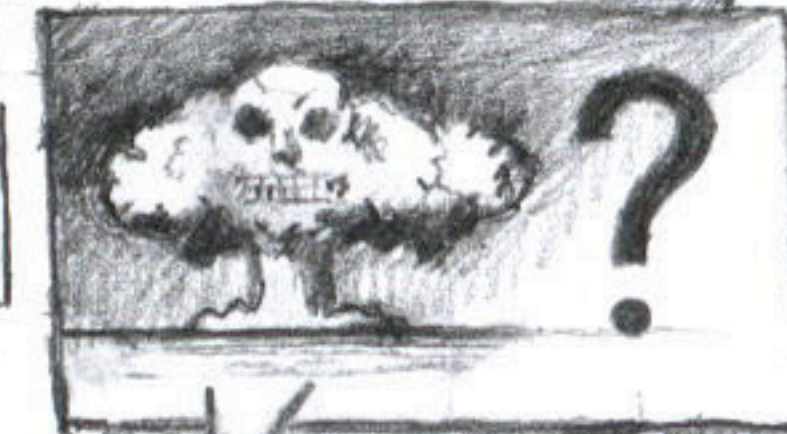

Yes, these machines are really able to think!

I am sure about the fact that conscious actions lie beyond computer simulations.

Compared to an ordinary PC a quantum computer is like nuclear power to fire!

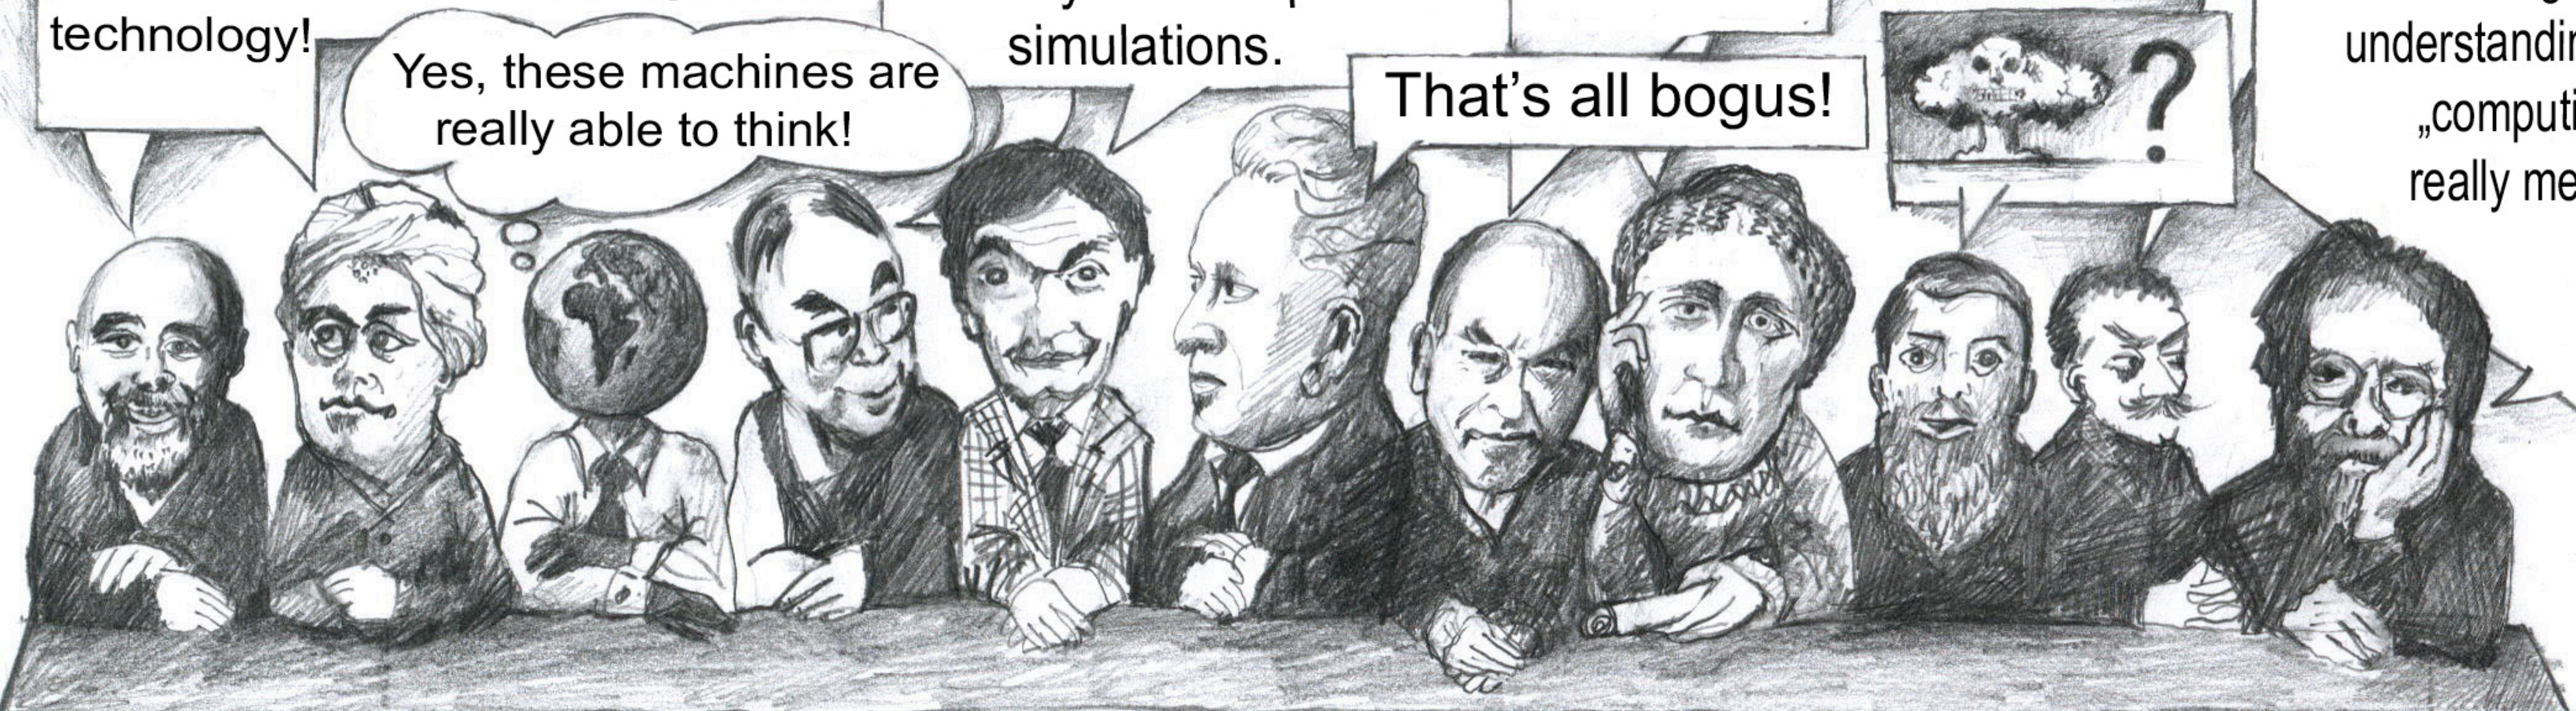

As a key technology of the 21st century quantum computers will change our concepts of mind and information!

That's all bogus!

This technology can compute a million times faster than today's digital machines!

Yes, but we will face a few changes in our understanding what „computing“ really means!
